Sep 2, 2018 In conventional PC's, a monitor is a stand-alone device placed on a desk, with a keyboard, mouse, and other accessories connectable directly or remotely to the PC. A motherboard holds memory and other hardware that operate the PC and connects it to the monitor. Recently, PCs have also been equipped with integrated graphics cards that increase the performance of the graphics display. Also, conventional PC's have been equipped with audio ports, LAN, Bluetooth, and other peripheral devices that have had limited functionality and have not integrated well with an operating system or the PC itself.Q: How to put text into the middle of a circle with CSS? I need a CSS only solution for the following problem. I need to get a text into a circular element:

---

The text should wrap around the circle (otherwise only the outer part of the text will be shown). If the text is too long the circle should become smaller to show the text partially (you can try it out with the search input). The problem is, that the circle should be one px high. I don't want to use background images because I want to support IE7. Any ideas how to do that? A: Your question isn't so clear, but I think I've read what you are looking for: a CSS solution using a left and right margin so that the text can wrap around a circular element. `.circle { -moz-border-radius: 50%; border-radius: 50%; -webkit-border-radius: 50%; width: 100px; height: 100px; margin: 30px auto 0; background: green; }` It is quite a bit of CSS though, and would be difficult to achieve in IE 7/8. But you could simplify it quite a bit by using the ellipsis trick. Demo: Be aware that `display: inline;` does not have any effect on things like `border-radius` so they will still appear square. Saturday, July 24, 2017 How to listen to ambient music for healing, inspiration and enjoyment Have you heard about the science behind how the human brain works and how it creates healing and inspiration for others? Do you know ba244e880a
