I am trying to use a macro to populate an image in visual studio. The process is working if I use a direct link to the web server (ie. but when I use the VSPRO ID like this ( the image loads fine but the images does not get populated. Any ideas? The code I am using is below: public void RunSqlCommand(string sql) { string xml = string.Empty; XmlDocument doc = new XmlDocument(); XmlNodeList records; doc.LoadXml(xml); foreach (XmlNode node in doc.SelectNodes("/Imaging/Images/Image/Layer[@name="+ sql + "])) { ImageLayer img = new ImageLayer(); img.ID = "img" + int.Parse(node.Attributes["mid"].Value); img.Name = node.Attributes["name"].Value; img.Source = node.Attributes["src"].Value; img.Width = 200; img.Height = 200; tableLayout1.Controls.Add(img); } } A: If you are using table layout you can create an Image control and set the ID for the control and then add it to the layout. Your code would change to something like this. ImageLayer img = new
