For the most part, creating or customizing a help system is a simple and intuitive process. However, sometimes it requires knowledge of an editor other than Microsoft Word or even HTML. In those cases, it's time to take the guesswork out of Help authoring by using ComponentOne Doc-To-Help Enterprise. With this component, you can create in-context Help systems from any

content editor you use: HTML, Word, RTF, PDF, PDF/A, HTML Help, and Apple iWorks. You can even use Doc-To-Help with existing HTML Help files from third-party Help vendors. Doc-To-Help Enterprise provides an end-to-end solution for creating Help systems in the most powerful editors available. You can create in-context Help systems from your content editors by using familiar tools such as Microsoft Word and Microsoft FrontPage. You can then create

standard HTML Help files by converting your Help to HTML. ComponentOne Doc-To-Help Enterprise has been enhanced with component-specific capabilities, eliminating the need for a bloated Help authoring toolkit. New Features:

- ☐ ComponentOne Doc-To-Help Enterprise 2006 is now licensed on a perpetual basis. ☐
