This program was built to make easy the task of counting the notes of a musical instrument. Instead of counting the notes by hand, you can use this program to easily count them in multiple octaves. You can select the instrument and the octave number to view the frequencies of notes. Nov 09, 2007 I dived into this piece of software. I really liked it. It s fast, very easy to use and it provides you with a lot of handy statistics. It does one thing very well and that s to show frequency of notes for multiple octaves. Also, it gives you statistics, which are not available in excel. The only thing I did not like about it is that it did not sort the notes according to the octave they belong to. Sorting the notes is a bit annoying when you want to compare the notes of multiple octaves, but you can do this using another software, like freibaut or

freicomp. Sorting the notes by octave and by note would be a great improvement. Unfortunately, this program is not accurate. If you type a given note in the "Type Note" textbox, you get different frequencies of notes in different octaves. In "Octave Number" you get good results in octave (for each note which has not gap) numbers. If you type a given note in the "Type Note" textbox, you get different frequencies of notes in different octaves. In "Octave Number" you get good results in octave (for each note which has not gap) numbers. So, If you get results in octave number you got correct results. But if you get results in note numbers you got wrong results. You should type a given note in "Type Note" textbox. Nov 16, 2007 This software is not accurate, you get different results than the other freibaut. The problem is that it is not very fast. I have tested it with all instruments and all freibaut is slow. When you type a given note in "Type Note" you

get different frequencies of notes in different octaves. Also the calculation of the frequency is not very accurate. That s my experience. Nov 17, 2007 I too experienced problems with this program. It often got the wrong note frequencies. I have a Roland FZ piano. The program cannot differentiate between the notes. (But it's at least accurate if the note is a fixed

Freklister is a simple Java-based application that enables you to view the frequency of musical notes in multiple octaves. Freklister is very easy to use, as you just have to select the note, enter the number of octaves and press a button to view the note frequencies. The user can also select the width of the octaves to show the higher or lower notes when displayed. You can also select between ascending and descending octaves. The octaves can also be displayed on a logarithmic or linear scale. Freklister Features: Freklister can be divided into two independent windows. The first window lets the user select a note, a range of octaves and a width for the octaves. The second window displays the octave distribution of selected note within the selected range of octaves. You can also select whether the range of octaves should be ascending or

descending or whether a logarithmic or linear scale should be used. All notes below the selected note are shown with the nearest octave. Viewing the numbers of each note is also done automatically. You can also specify the output format of the numbers to be a long or double for easy calculation. Next to each note, there is also a sound sample of the note. The note frequency can also be computed for the selected note and output in either a simple format or long format. The frequency can also be displayed in multiple octaves simultaneously. Freklister is a simple Java-based application that enables you to view the frequency of musical notes in multiple octaves. Freklister is very easy to use, as you just have to select the note, enter the number of octaves and press a button to view the note frequencies. Freklister by Greg Ginn of July TwentyOne Software was developed using Java and the AWT. The default

view is a simple Treble Clef for a single octave, but the program can show up to 12 octaves, as well as a variety of different minor and major scales. Usage: To use Freklister, select the octaves you want to view and then press the corresponding button. The selected octaves should display on the screen as well as a klickable/printable representation of the note frequencies. Freklister Features: Threble Clefs for most common note types. Menu to switch between common scales and tonalities. Store up to 12 octaves. Printable representation of note frequencies. Sortable/searchable note lists. Can be customized. Small standalone package that you can run from a floppy disk. License: Freklister is provided "as is" without any warranty. Freklister is copyrighted software, developed by Greg Ginn. Freklister can be freely redistributed for educational purposes, but may not be bundled with other software or sold commercially. Freklister source code is not

included with the binary package. Freklister source code is freely available for download from Greg's web site. Thanks for your note- it's always better to have customers happy with a program. With that said, your report indicates that you are having trouble getting an error message. I will reach out to the support team to see if there is a solution. Again, thank you for the note. This is a problematic issue as there are no logical errors. I can reproduce the problem with your note. If I try to export notes in the lowest octave (the 0th note) then the export fails with an error. If I export the note in the 1st octave then it generates the correct data. So it appears that the data is being saved correctly, it's just that it can't be exported if there is an extreme limit on the amount of data which can be stored. I can get the notes listed from the lowest to highest octave
