Replace Registry Values Tool

This is a free and open-source registry cleaner application that can be used to search and replace registry keys and values. If you would like to remove the key from the computer, it is possible to select the key from the drop-down menu in the software Program installation: The installation process is fairly simple, and just takes a few minutes. It downloads a small installer file, and you can launch it directly from the desktop without going through the Control Panel. The latter is also available from its Help menu. Once launched, the application displays the main window, which asks you to select whether you want to modify or add a new key. Clicking the tool's Remove button leads to a window where you can select the root registry key from which the value should be removed. When you select the root registry key or subkey, a window opens, which contains a description of the key or subkey, but also a couple of option buttons. Clicking the Find button leads to an empty field where you can type the desired search string. After pressing the Replace button, the field will fill up with the new registry value. To add a new key or value, just press the Add button. Interface features: The program's user interface is very simple. On the left side, the main window displays the available options. On the right, the field where the values are replaced. The bottom bar features a Refresh button. The application's features are quite limited. It can search for only one registry value at a time. Also, it is possible to modify only some of the available options. For instance, you are not able to write or remove a new value. You can, however, choose whether the application should try to insert the new value in between existing values or replace all contents with the new one. Overall impression: Based on the limited number of features and general interface, it seems that Replace Registry Values Tool Product Key is mainly designed for those users who either do not use registry keys and values or are on Windows XP or older. It should be noted that if you want to use some additional features, such as finding and modifying a large number of registry keys and values at once, you will have to look for a different solution. Simperium happens when you manage your data from a site that is a useful and safe.
