Brainworx Bx Meter VST AU V111 MAC OSXzip.Q: Is this safe to use for child components? When I have child components in my Component tree is it OK to just use for (let key in this.props.children) { to populate the children with the values found in the children objects. let childKey, childValue; for (let key in this.props.children) { childKey = key; childValue = this.props.children[key]; } Or is there a better way to populate child components in your component tree? Here is an example using React Router that might give a better idea of what I am trying to do in my app. class TopLevel extends React.Component { constructor(props) { super(props); this.state = { value: {}, children: { todos: [{value: 'do stuff'}, {value: 'do stuff'}]
