Tired of tedious Excel work? You need a system that doesn't fail you under any circumstances? 3D Ninja Studios has presented the real-time tactical strategy game Ninja Rama 2. In this installment of the popular franchise, you are taken back to the battlefields of ancient Japan, where you will make use of more than 20 different weapons and many different fighting techniques to defeat hordes of enemies and conquer the game. However, you will be alone in your fight against the ninjas and the pirates of the island, because, in real life, it is virtually impossible to defeat an enemy in a fight unless you are armed to the teeth. If you want to enjoy the game in a way that is very similar to the original, you have to work with the same controls and the same combat system that proved very successful. In this case, you will see on the first screen a lot of information that includes your health, your position in the current map, the speed of movement, your weapon and attack levels, and you will be able to see a few screenshots of what you have done up to now. Of course, all this information will be presented in a flashy way, so it will be easier to understand it all. As for the gameplay, it consists of a combination of action and strategy, in the same way as in the first game, and the difference is that you will be moving from one map to another, which will take you to places where you will find enemies and you will have to kill them in order to progress. In the first map, for example, you will fight against multiple types of ninja and a handful of pirates, so you will have to use your tactics in order to conquer the entire map without being killed by the enemies. There are also some power-ups that you will find in each level that will help you in your fight, while their appearance and the duration of their effect is not always a good indication of how they are going to help you. Finally, the game features an online multiplayer mode in which you can challenge players from all over the world and see who will be the winner of the battle. The online community consists of more than 6 million players and will grow even bigger in the coming years. Considering that this is a real-time strategy game, you will be able to experience all the gameplay in a lot of ways, since all the parts are independent of one another, except for the basic functionality of the interface. There will be certain situations that require you to
