A quantitative risk estimate for the development of early pregnancy failure secondary to intrauterine infection with the human immunodeficiency virus. The identification of risk factors associated with early pregnancy failure, specifically intrauterine infection, is essential to the development of effective interventions. The objective of this study was to construct a quantitative risk estimate of early pregnancy failure in women infected with HIV. An epidemiological model was constructed based on the risk factors that were identified in the literature and on the reported rates of perinatal HIV transmission. The HIV-positive

---

woman is at high risk of developing an early pregnancy loss if she experiences a certain duration of unprotected intercourse before her first menses or if she is exposed to, or infected with, a highly active antiretroviral agent during early pregnancy. A novel estimate of risk, the Pregnancy-Specific Risk Index (PRSI), was developed. Although the PRSI cannot be used to make individualized decisions, it was helpful in providing a risk management framework to assist clinicians in the delivery of individualized risk assessment and management for patients who develop early pregnancy loss.

The present invention relates generally to a training machine, and more particularly, to an exercise machine having a counterweight to provide resistance to an operator. Heretofore, the prior art has taught many types of exercise machines, including a useful variety of exercise machines for use in combination with a treadmill. A number of exercise machines are taught as being counterweighted, and thus provide resistance to the operator. Furthermore, exercise

---

machines having a counterweight are taught as being convertible for use in combination with a treadmill, as taught by U.S. Pat. No. 4,891,249. The present invention provides a unique apparatus for use with a treadmill. The unique apparatus allows an operator to utilize an exercise machine as taught by the prior art. The apparatus of the present invention however, provides a first coupling means for coupling an exercise machine thereto. The coupling means allows an operator to utilize the exercise machine in the absence of a treadmill. That is, the operator may stand on the exercise machine and manually operate the exercise machine. The unique apparatus also provides a second coupling means for coupling the apparatus to a treadmill. The apparatus allows for the convenient use of the exercise machine when

a treadmill is not also required. That is, the apparatus allows an operator to utilize the exercise machine without the need of a treadmill, to perform various exercises, such as running, walking, jumping, and the like. Four questions--answers of nine European obstetric anaesthetists. To evaluate the opinions of European obstetric anaesthetists regarding the management of preterm labour, and the use of fetal monitoring during labour in women destined for repeat caesarean section. An anonymous postal questionnaire was sent to practitioners in obstetrics and anaesthesia, in eight countries, asking them about their opinions on preterm labour, fetal monitoring, and appropriate management of women destined for repeat caesarean section. Three hundred and thirty-one surveys were mailed (176

very easy to use music and video converter. However, it is a little expensive for a free application. The interface of OJOsoft M4P to MP3 Converter is simple but it can be a little difficult to get used to it. You can modify the parameters of any kind of your video and audio files with only a few clicks. Well, you can only use the program like a music player and not as a converter. Moreover, the program is windows-based and you will need a fixed Internet connection to work with it. But, if you do not have an Internet connection you can download offline videos and convert it to any format you need. Another disadvantage is that OJOsoft M4P to MP3 Converter supports only three conversion modes, which are lossless MP3, lossy MP3 and AAC.
