Alias surfaces provide an efficient way to apply solutions that are typically applied in house by the mechanical design team. Alias surface saves valuable time, resources and expenses by integrating your conceptual and technical design into one tool. Use Alias Surface for creating surfaces from other solutions, such as solids, shell, wall, extrusion, or other surface elements. Alias Surface also provides the surface boundaries and profiles that can be saved and re-used throughout the design development process. Alias Surface functions work with concept surfaces, and conceptual and technical surfaces. These surfaces can be created from 3D models, live data or visual inspection images. Alias surfaces can be used for the following applications: Create or refine a concept surface for your conceptual design. Use a concept surface to plan your wireframe style. Consolidate or combine concept surfaces to create a technical surface. Re-use a surface throughout your design process. Alias Surface Features: Alias surface saves money by eliminating the use of 3D models and creating surfaces directly from 2D CAD data. Alias surfaces utilize a native databased and workflow for geometrical and parametric editing which allows the creation of surfaces from source data. Alias surfaces can view live data or an inspection image directly from the surface. Alias surface can work with any application that can generate a surface. Alias surfaces can work with any application that generates 2D surfaces (e.g., MagicaVox, Catia, and SolidWorks). Alias surface allows for the use of traditional and parametric design tools. Use Alias surfaces to create surfaces that retain its properties over an unlimited number of uses. Alias surface is an Autodesk Certified Alias Solution. Alias surface provides an accurate rendering of solid modeling surfaces. Alias surfaces retain original surface properties when rendered through other applications. Alias surfaces allow the use of surface media to convey surface ideas. Alias surfaces add surfaces on a surface that can be used as constraints, and allows for the creation of arbitrary constraints. Alias surfaces retain the topology of the surface. Alias surfaces are more consistent in surface maintenance between applications. Alias surface allows for the creation of a surface from a source element. Alias surfaces have the ability to display the parameters of a surface or source element from the source of the surface. Alias surface allows the user to retain the surface boundaries. Alias surfaces can integrate 3D models with surface data without the need for an intermediate modeling application. Alias surface provides useful surface

What's New In Autodesk Alias Surface?

In October 2017 AliasSurface made its debut at Industry Preview. AliasSurface is an alternative to Surface. It brings advancements in surfacing functionality, and is built on the intuitive and easy-to-use Surface toolset. In addition to bringing surfacing functionality, AliasSurface makes refinements to the design experience, and includes a host of new tools that are equally intuitive and easy to use as on Surface. One of the biggest refinements to the design experience on AliasSurface is the ability to design a surface at any level of detail, and create a surface chain from that basic sketch. We've made a lot of progress in the past few weeks and several users reported they were experiencing issues when doing their initial surface design. We're aware of these issues and are working on fixing them. We are also looking for ways to enhance our support forum, and we will be turning on the ability to capture video and audio from within Surface and AliasSurface for continued customer feedback. I'd like to apologize to you, our customers, for the problems we have been experiencing. Our engineers have been working hard to fix the problems that are preventing you from experiencing design excellence. We're looking to continue to provide you with the best and most innovative design software experience, and we are committed to doing that. We will make sure to give you updates throughout the Beta testing, and we look forward to your feedback. If you are experiencing issues now, please report it on the Autodesk AliasSurface Feedback Forum. We will fix the issues you report, and keep you informed. Chris, that doesn't include the AirTracking feature that has been updated recently. It's a new tool which automatically tracks and fits the selected surface into a set of planes, thus making your 3D shape fit perfectly to the design surface. You can also get your design ready in a snap - just enter the parameters and let the tool work the rest. So no, I'm afraid it doesn't include AirTracking, and we have no immediate plans to update its plugin in Autodesk AliasSurface. We were thinking about a standalone application that would have both AirTracking and a better UI than what's currently in AliasSurface, but that wouldn't be the next product to come out of the AliasSurface team. So no, I'm afraid it doesn't include AirTracking,
