Quick Access to Crop Edge Options: When you want to crop an object for size-specific reasons, the new crop option in the Tools panel opens a new window with options to set size, rotation, and other crop properties. (video: 2:06 min.)
Radial Draw, Grid, and Fill Options: AutoCAD 2023 introduces an improved application of Radial and Grid. When you create a new drawing object using the New option, it defaults to Radial and uses a Grid style. You can set the Grid, Width, and Width Increments of the new object to create a radial drawing that is spaced evenly along a circle. You can also define a fill style (RGBA, R, G, or B) that you use in later drawing objects. You can also change the default Radial object's style to be a Grid object. (video: 1:19 min.) A single global parameter setting is used for new drawings that have an existing drawing file to make creating and resizing drawings easier. You can select the Auto-Generate New Objects to Existing Files option, which automatically generates new objects that use the same default settings as the current drawing. (video: 1:01 min.)
AutoLines Object: This is the new default choice for linetypes when you create a new drawing object. Use the Object Type dialog box to set the linetype of the new drawing object as one of the six available choices. (video: 1:05 min.)
Line Props: The LineProperties dialog box in AutoCAD 2018 R1 introduced properties for both ends of a line, and for a single point. In AutoCAD 2023, the dialog box lets you add properties to lines, multi-segment lines, and arcs, as well as setting the attributes for individual points. For example, you can apply shape style attributes, fonts, line colors, and line widths to lines and arcs. You can also use the Attributes for Objects option to apply these properties to objects. (video: 2:40 min.)
Polyline Object: In addition to the LineProperties dialog box, this new type of drawing object in AutoCAD 2023 also lets you set properties such as line color, line width, line and point attributes, and polyline properties. Use the Polyline dialog box to set the properties for the new drawing object. (video: 2:41 min.)
