3. Text To Speech (TTS) for Linux A text-to-speech system translates text to speech. Rather than speaking the text, the text-to-speech system converts the text to speech. Text-to-speech systems are often used in technical applications such as digital books, used for people who have difficulties reading, or people that use accessibility features. Text-to-speech servers, such as the Java TTS or Text-to-Speech, produce voices in several languages, and let programs that need voices to talk to the server to download the voices and convert the text to speech. The TTS works like a TTS client, but the client is a Linux or Unix program that uses a text-to-speech server. One of the reasons for the popularity of the Java TTS is the availability of voices in a lot of languages. TTS for Linux is a command line program written in C++ that allows you to talk to a text-to-speech server. It is distributed as source code, therefore, it is possible to build it on any distribution. The source code is compatible with GCC.

4. Desktop Text To Speech (DTTS) A text-to-speech program translates text to speech. Rather than speaking the text, the text-to-speech program converts the text to speech. Text-to-speech systems are often used in technical applications such as digital books, used for people who have difficulties reading, or people that use accessibility features. Text-to-speech servers, such as the Java TTS or Text

What's New in the?
